

H3M
ENVIRONMENTAL

EQUIPMENT

GEOPROBE 7822DT

This versatile, highly maneuverable unit allows our team to quickly mobilize to site and perform Preliminary and Detailed Site Assessments along, with any other sub-surface soil sampling or contamination delineation services. Our integrated service offering means our clients don't have to contract additional disciplines to perform environmental drilling.

The H3M team, equipped with the 7822 DT unit, can perform a variety of services including:

- Sub-surface soil sampling;
- Contamination investigation, characterization and delineation;
- Direct-push sampling system to maintain vertical profiling of the soil horizons;
- Solid-Stem Auger system to help with more challenging soil conditions;
- Hollow-stem Auger system, where there are issues with integrity of the borehole;
- Installation, sampling and monitoring of groundwater wells; and
- Borrow Pit/Mining suitability assessments.

Key Benefits

- Highly maneuverable to remote sites due to small footprint
- Tracked and low ground-pressure to allow for access into sites with low-grade access
- Continuous operations with minimal downtime and maintenance
- Soil sampling and analysis, direct push sampling and solid/hollow stem auguring
- Powerful performance, highly adaptable, and compatible with Geoprobe® brand tools
